## PRODUCT DESCRIPTION

Vaultex V251 Safety Spectacles are protective eyewear designed to provide safety and protection in various work environments. These safety spectacles come in two variations: clear and dark lenses.

**Clear lenses** are ideal for general use in well-lit environments or when maximum visibility is required. They provide excellent clarity and allow the wearer to see colors and details without distortion while protecting the eyes from potential hazards such as flying particles, dust, and splashes.

**Dark lenses** are specifically designed for environments with bright light conditions or where protection from intense light or glare is necessary. These lenses are typically used in outdoor settings or when working with bright light sources, such as welding or cutting operations. Dark lenses help reduce eye strain and provide protection against harmful UV rays.

Both variations of the Vaultex V251 Safety Spectacles feature a durable and lightweight frame, typically made of polycarbonate material, which offers impact resistance and ensures long-lasting wear. The spectacles also have adjustable temples and a comfortable nose bridge to provide a secure and customized fit for different face shapes and sizes.
